

HOUSEHOLD CHEMICALS

Each Pennsylvanian produces an average of 4 pounds of chemical waste every year. Combined that's 25,000 tons annually!

Common household chemicals include paints, cleaners, automotive fluids, garden chemicals and more. These products can be identified as toxic by label markings such as "caution," "poison," or "flammable." It is UNSAFE to pour these household chemicals down a drain or to discard them with curbside trash as toxins may contaminate groundwater and local waterways used for drinking.

Beaver County Recycling Center accepts and responsibly recycles:

- anti-freeze
- motor oil
- fluorescent light bulbs
- transmission fluid
- hydraulic oil

Find an extensive list of accepted materials at www.BeverCountyPA.gov/Depts/Wastemgmt or contact your local municipality.

HHW Disposal Resources

Below are other options for responsibly disposing of household hazardous waste

- **Automotive fluids** are accepted at many auto body shops
- **Latex-based paints** - dry out and place with regular trash
- **Environmental Health & Safety Services** - a local business that hosts public drop offs and pickups of many household chemicals. www.ECSR.net
